

## QUALITY AND SAFETY POLICY

To-Press ensures the production of die-casted parts in a light alloy, able to satisfy the regulatory standards and the clients expectations, in a profitable way for the company, by respecting the law obligations and by placing at the center of attention the health and the safety of the employees. All the activities are carried out by following some basic values that the company has given to itself:

- ✓ The constant presence of the shareholders.
- ✓ Passion in the own job.
- ✓ The volition to ensure:
  - A complete service managed with competence, seriousness and experience.
  - The maximum quality standard, from the design and the production of the mold to the die-casting and surface finishes.
- ✓ Clarity and fairness in front of the all the stakeholders, at first the customers with the goal to keep a good relation over the years.
- ✓ The orientation to an increasing improvement, intended as a growth and development stimulus, by monitoring and evaluating periodically the fixed goals.
- ✓ The maintenance of a high level of flexibility, given by the possibility of producing small size batches.
- ✓ The determination of considering the safety on the work place a fundamental element of every working activity, with the prevention of accidents, injuries and professional illnesses through:
  - A careful evaluation of all the risks for the safety and the health of the employees, even by choosing the installations and equipment also by designing the work place.
  - The spread between the employees of the culture of safety, by developing the knowledge of the risks and by promoting responsible behaviors even with through appropriate training and adequate working instructions.
  - The commitment to promote the consultation and the participation of the workers.
- ✓ The attention to the personal growth, which professional competence represents one of the most important sources.
- ✓ The creation of mutual cooperation relationship with the suppliers.
- ✓ The commitment to respect the current legislation and all the applicable requirements as essential prerequisite of the company's work.

This leads the company to having a working method able to ensure a high quality and safety level, thanks to:

- ✓ The capacity of being a good unique interlocutor from the design of the mold to the finishing of the worked part.
- ✓ The competence and the professionalism of the people
- ✓ The presence of advanced technologies for the 3D measuring and the radioscopia of the projects.
- ✓ The seriousness by respecting what was agreed.
